Forecast for Sunday 13 Dec 2020

Weather: Cloudy with a band of rain soon spreading across the Lake District from the west this morning. The rain may be sleet or snow on the highest tops. Rain will be heavy at times and quite persistent through the middle of the day becoming lighter and more drizzly by nightfall.

Chance of cloud free mountain/hill tops above 800m: A slight chance of cloud free tops at first, but for most of daylight hours the fell tops will be shrouded with extensive low cloud above 4-500m.

Visibility: Visibility will be moderate but become quite poor in heavier rain in the middle of the day. In general navigation will be tricky at height.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Freezing level will rise rapidly in the morning with any wintery precipitation soon turning to rain. Severe gales on the fell tops with some very strong gusts.

Forecast for Monday 14 Dec 2020

Weather: Showery outbreaks of rain – some of these will be heavy. Perhaps some breaks in the cloud out with showers and less frequent showers in the afternoon.

Maximum wind: Southerly 25-30mph with gusts 40-45mph

Chance of cloud free mountain/hill tops above 800m: 40%, scattered cloud will shroud the tops at times especially around more southerly fells.

Visibility: Mainly moderate or good but becoming poor at times in rain.

Temperature: **Valleys:** Plus 8 celsius.
At 800m: Plus 3 celsius
Freezing level: Above the summits.

Mountain Weather Forecast

Ground Conditions Supplement

Date: Saturday 12 December, Location: Helvellyn summit at 14:45. Another warm and wet day on the hill with the thaw slowly continuing at all levels. The majority of the popular routes on Helvellyn including Striding & Swirral Edges can now be climbed without setting foot on snow. The few remaining patches of wet snow are to be found on easterly aspects above 800m and in and around sheltered hollows & features. Any drop in temperature will quickly refreeze these areas of saturated snow which will then require crampons and an ice axe to safely cross. The Helvellyn plateau is generally clear and the remaining ice and hard snow that was evident on many of the paths from the compression by walkers feet has softened and is an easily avoided hazard. Temperatures on the summits were just above freezing with a lot of moisture in the air so full winter clothing should still be carried as there is a real risk of developing hypothermia if you are stationary for any period of time. Temperature: plus 1.2C, Maximum wind speed 16.3mph, Wind chill: minus 5.3C, Average wind speed: 14.0mph.
